HIGHLIGHTS FROM 2019

FEBRUARY OPEN DAY TO DEMONSTRATE THE ADVANTAGES OF LAND PREPARATION AND IRRIGATION MACHINERY.

SEPTEMBER OFFICIAL TRACTORCO LAUNCH OF TATU PLOUGHS.

TATU OIL BATH BEARING
MARCHESAN

FEATURES:

- Reliable
- High Quality Components
- Less Maintenance
- Change of oil after 1000 hours
- Double seal to stop the oil leaking from the bearing and dirt from entering it. This prolongs the life of the bearing because the wear is less
- This sealing systems has been used successfully on heavy equipment such as Caterpillar Crawler rollers for many years

Sherbel Almeida, our partner from **TATU BRAZIL**, took part in the official launch of TATU'S range of Mouldboard and Disc Ploughs. In addition, he conducted a seminar about the benefits of oil bath bearings in their range of Disc Harrows.

EXHIBITIONS AND CONFERENCES 2019

Tractorco engaged in different exhibitions and conferences to meet new and existing customers from around the Philippines from Luzon to Mindanao.

TRACTORCO took the opportunity to showcase our products and services at **AGRILINK** in Manila last October.

In November TRACTORCO exhibited a range of machinery for Corn production at the **NATIONAL CORN CONGRESS** in Iloilo.

Also in November TRACTORCO exhibited at the **PHILIPPINE NATIONAL CARABAO CONFERENCE** in Bukidnon.

NEW RANGES OF MACHINES ARRIVING IN 2020

TRACTORCO is introducing the JF SILO MASTER FORAGE BAGGER and JF 9000 FORAGE WAGON which are ideal partners. Together with the JF forage chopper, they are a complete silage making system.

JF SILO MASTER FORAGE BAGGER

is the answer to effective silage making for medium to large scale production. The length of the bag can be adjusted according to the amount of silage required. Small amounts can be bagged and sealed separately and silage can be fed daily with less spoilage. This system produces high quality silage. Losses of only 2% inside the bag versus up to 20% in traditional systems. Enables higher silage production per hectare. Therefore less land required for the same output of silage.

SPECIFICATION:

BAG – Capacity 50 to 90 tonnes, Diameter 1.83m, Length 60m

TRACTOR – 80 HP, 540 RPM

FEATURES:

- Fill rate up to 25ton/hr
- Blade pushes material into the bagger under pressure
- The density of material can be adjusted
- UV protected silage bag- will last up to 2 years
- Ideally situated on hard standing such as concrete
- Conveyor folds for transport

[CLICK HERE FOR THE VIDEO OF JF SILO MASTER FORAGE BAGGER](#)

JF 9000 FORAGE WAGON

has a reversible discharge mechanism which means that it can be changed from side discharge to rear discharge quickly and easily.

SPECIFICATION:

Capacity – 9m³, strong stainless steel body

TRACTOR – 70HP, 540 RPM

FEATURES:

- For side discharge the moving floor takes material to the front of the wagon where the auger will discharge through a small door at the side.
- Side discharge can be used to bag silage or to transport forage directly to feeding troughs
- The moving floor can be reversed to move the load to the rear of the wagon where it can be discharged through the fully opening rear door in approx. 2 minutes
